JATEEN YADAV

Full Stack Developer | Flutter Developer | AI/LLM Integration

+91 83989 86788 | jateen.yadav1@gmail.com | linkedin.com/in/jateen-yadav | jateenyadav.netlify.app | Gurugram, India

SUMMARY

Full Stack Developer with 3+ years building enterprise web, mobile, and desktop products at Hitachi. Built 4+ full-stack apps, 4+ Flutter apps (Google Play Console, TestFlight), and 3+ React and TypeScript frontends from scratch. Adds AI features with AWS Bedrock, MCP, and LLM APIs. Building LifeOS, a personal AI app in Google Play closed testing.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Dart, Python, Kotlin, SQL

Frontend: React.js, Next.js, Redux, Zustand, Webpack, Three.js, WebGL, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, REST APIs, JWT, Google Sign-In, Firebase Auth, Mongoose, Prisma

Databases: MongoDB, Firebase (Firestore, Realtime DB), SQL

Mobile & Desktop: Flutter, Dart, Android, iOS, Kotlin (Android), Electron, Apache Cordova, Google Play Console, Apple TestFlight

AI / LLM: AWS Bedrock, MCP (Model Context Protocol), OpenAI API, Google Gemini API, Ollama, LangChain, RAG, Prompt Engineering

DevOps & Testing: AWS (S3, EC2, CodeCommit, Bedrock), Docker, CI/CD, Git, GitHub, Jest, Vitest, React Testing Library

WORK EXPERIENCE

Full Stack Developer (Junior Research Engineer) | Hitachi India Pvt. Ltd. (via Randstad) Sep 2023 - Present

- Built and deployed real-time enterprise dashboards with React, Node.js, MongoDB, and REST APIs, serving overseas clients with live machine data, authentication, and operational analytics.
- Built Electron desktop and Flutter mobile (Android, iOS) apps from one shared architecture.
- Built interactive 3D product visualizations with Three.js and WebGL for client demos, reducing manual demo effort.
- Worked on AI/LLM pipelines with AWS Bedrock and connected backend services to AI assistants through MCP (Model Context Protocol), so product features can be controlled by AI.
- Deployed backends and databases on AWS and managed S3, EC2, and CodeCommit through the console.
- Improved frontend load time and responsiveness with Redux state management, lazy loading, and Webpack tuning.
- Worked directly with global stakeholders, including teams in Japan, to deliver production releases.

Software Engineering Intern | Hitachi India Pvt. Ltd. Feb 2023 - May 2023

- Built a React dashboard for factory operators to view real-time machine states and run production simulations on an industrial assembly line; converted to full-time within the year.
- Used Redux for state management, configured Webpack for faster builds, and styled the app with Bootstrap, including dark mode.

Frontend Engineering Intern | Acadlift.com: reusable React component library Jun 2022 - Jul 2022

Frontend Development & Analytics Intern | GoPerspective Technologies: ML dashboards, Python Sep 2021 - Oct 2021

Design Intern | iSchoolConnect Technologies: UI layout and logos for an event portal Apr 2021 - May 2021

PROJECTS

LifeOS: Cross-Platform Personal AI and Productivity App Google Play Closed Testing

React, Flutter, Kotlin, Node.js, Express, MongoDB, Ollama, OpenAI, AWS Bedrock

- Built a React web app and a shared Flutter app (Android, iOS) on one Express and MongoDB backend, so users reach the same notes, reminders, workouts, routines, and expenses from any device.
- Built a personal AI assistant with local Ollama and optional OpenAI and AWS Bedrock providers; retrieval (RAG) over saved records returns source references, and cloud calls need user consent. MCP server for other AI chatbots in progress.
- Built Kotlin services that detect supported INR payment notifications after user permission, with an encrypted queue, background retries, and duplicate prevention; a payment becomes an expense only after user confirmation.
- Implemented email and Google sign-in with bcrypt, hashed session tokens, and rate limits; added transactional account deletion, integer-paise money storage, and tests across backend, React, Flutter, and Kotlin.

ExamAce: AI-Powered Exam Practice Platform Live: exam-ai-tau-bay.vercel.app

Next.js 14, TypeScript, Tailwind CSS, Prisma, Zustand, Google Gemini API, OpenRouter, Nodemailer, Vercel

- Built a full-stack exam practice app for CBSE and JEE students with AI-generated papers (Google Gemini, OpenRouter fallback), camera-based evaluation of handwritten answers, a timed anti-cheating exam mode, and performance analytics.

EDUCATION

Kurukshetra University (JMIT Radaur) 2019 - 2023

Bachelor of Technology in Computer Science and Engineering | CGPA: 8.43

CERTIFICATIONS

Meta Front-End Developer Professional Certificate (Coursera) | Mozilla JavaScript Foundations Professional Certificate
